

Shreya Karki(K250137)

Team Roles & Actual Contributions

Thi Anh Pham	Project Manager / Analyst	Background, deliverables, login/registration, DPIA, report editing
Pratham	UI Designer / QA Lead	Objectives, NFR, clinician/admin UI, specimen/lab DFD, test plan
Kim Le	Programmer	Purpose, FR table, patient portal, reports dashboard, methodology
Shreya Karki	DB Admin	Assumptions, architecture, specimen UI, DFD Level 1, result/report data dictionary
Harsh Patel	Web Programmer / Lead Tester	Scope, reception/test request UI, DFD Level 0 & 2, sequence, implementation

Upgrade from roles only: this slide shows what each member actually delivered in the report.

Use Case Diagram — User Interaction

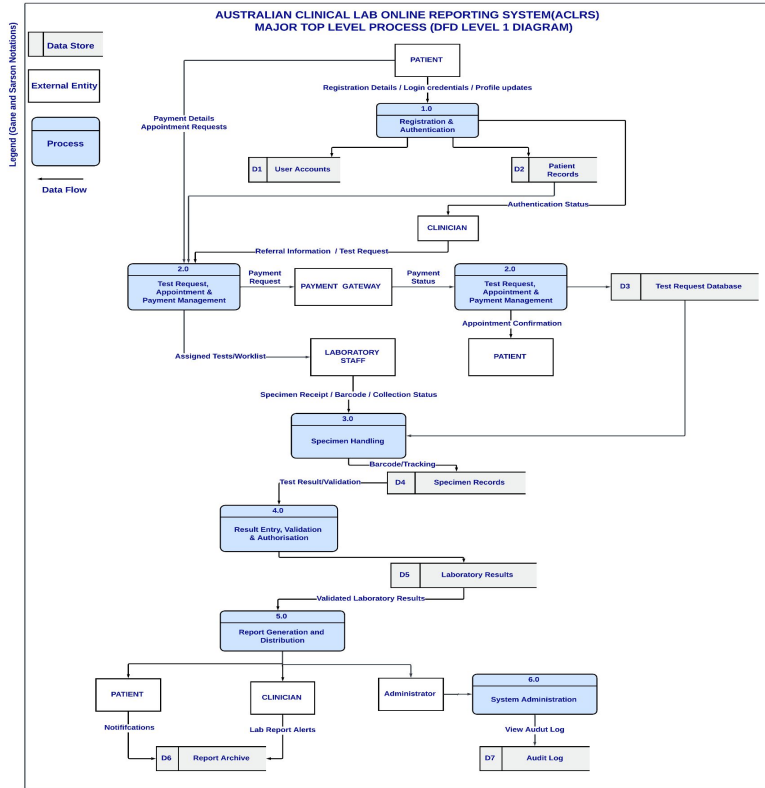

Reception and Specimen Module use case diagram

What it shows

- Reception Staff manage patient check-in, search and pathology request.
- Specimen Collector registers specimens and records rejection.
- External systems such as Medicare/API and LIS are shown where needed.

Use cases show who interacts with ACLRS and which functions they perform.

Context Diagram — DFD Level 1

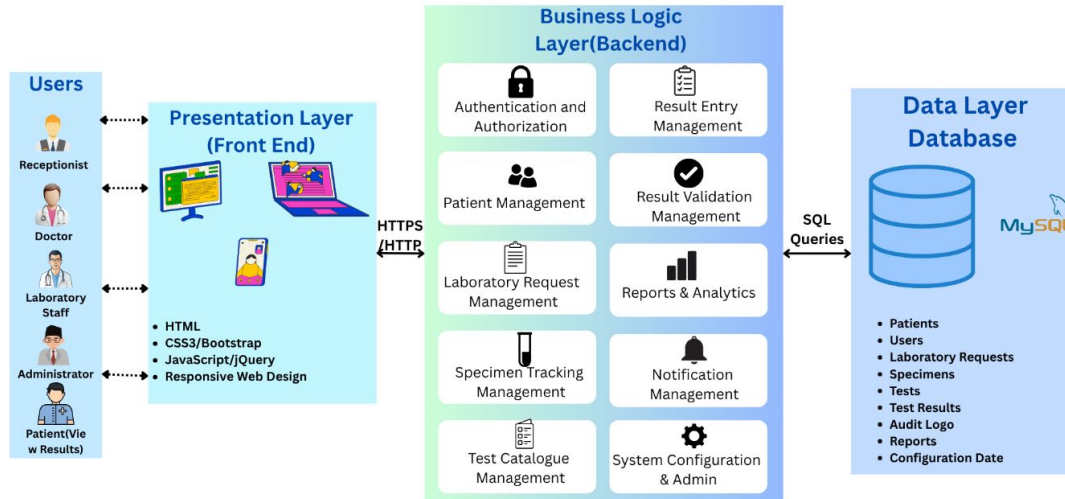

ACLRs system boundary and external entities

Key message

- The six processes handle that information with external users .
- The seven data stores save the information at different stages.
- The diagram clarifies the system boundary at deeper DFDs.

System Architecture — Three-Tier Design

SOFTWARE ARCHITECTURE (3-TIER ARCHITECTURE)

Presentation Layer

- Browser UI for patients, clinicians, reception, lab staff and admin.

Business Logic Layer

- Authentication, requests, specimens, results, reports, notifications and admin functions.

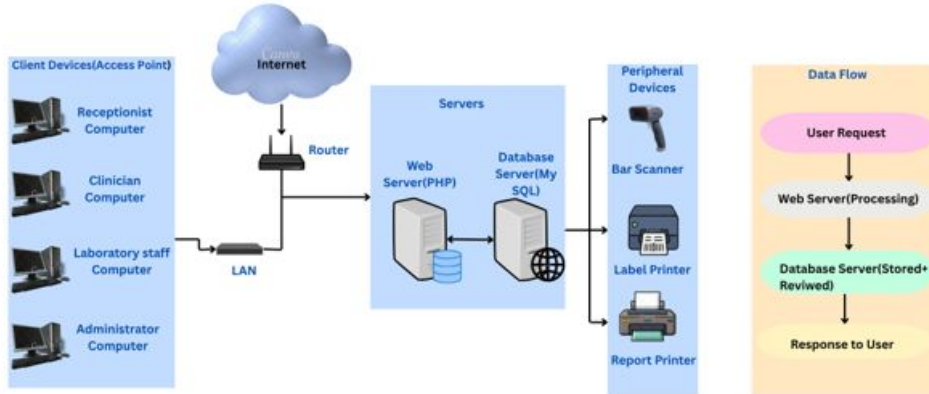

Data Layer

- MySQL database stores users, patients, tests, specimens, results, reports and audit logs.

Presentation, business logic and data layers

System Architecture — Three-Tier Design

HARDWARE ARCHITECTURE

Presentation, business logic and data layers

Client Devices and Network Components

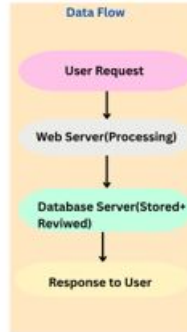

- Connection of patients, clinicians, reception, lab staff and admin with the system network

Web Server and Database Server

- Servers communicate continuously to process requests and retrieve data.

Data Flow

- Explains how information moves through the system

ERD Overview — Common Group Database Model

AUSTRALIAN CLINICAL LABS ONLINE REPORTING SYSTEM – ERD (Aligned 100% with UI Wireframe)
