

PRESENTATION MATERIAL – CLIENT PRESENTATION

GROUP MEL12

NAME OF PRESENTER: THI ANH PHAM

ROLE: PROJECT MANAGER

CLIENT: MR.SYED ALTAF

DATE OF PRESENTATION: TUESDAY – 18 AUG - 2026

AUSTRALIAN CLINICAL LABS

Online Reporting System

A smart, secure and reliable platform for laboratory testing and reporting.

Capstone Project Final Presentation

KAPAS System • Supervisor: Mr Syed Altaf

Thi Anh Pham(K230351) • Pratham(K240579) • Kim Le(K241140) Shreya Karki(K250137) • Harsh Shantilal Patel(K230058)

Purpose, Objectives, Scope & Assumptions

Purpose

- Develop a secure web-based platform for the full clinical laboratory workflow.
- Replace manual and semi-manual processes with one integrated digital system.

Objectives

- Automate patient, request, specimen, result and report processes.
- Support role-based access for patients, clinicians, lab staff and administrators.
- Improve accuracy, traceability and secure reporting.

Scope / Limitations

- Covers registration, booking, specimen tracking, result validation, authorisation and report distribution.
- Out of scope: full insurance claims, native mobile apps, EMR integration and historical data migration.
- Assumes stable internet, approved requirements and staff training.

Report

Key message: ACLRS connects the end-to-end lab journey in one secure workflow.

Key Technical Deliverables

A. Web Portals

- Patient, clinician, reception/staff and administrator interfaces.
- Role-specific screens for requests, reports, specimens and settings.

B. Core Workflows

- Test requests, referrals, specimen lifecycle and laboratory worklists.
- Result entry, validation, critical alerts and report generation.

C. Data & Security

- ERD, data dictionary, RBAC, audit logs and encryption controls.
- DPIA and privacy-focused design.

D. Project Assets

- Use cases, DFDs, sequence diagrams, test plan and implementation plan.
- User documentation and deployment support.

SRS

Wireframes

DFD

ERD

Data Dictionary

Test Plan

Implementation

Final deliverables support analysis, design, database, testing, security and implementation.

Non-Functional Requirements

Security

- Secure login, MFA and role-based access control.
- Patient data encryption and controlled access to reports.

Performance

- Most requests acknowledged within 1 second.
- Pages should load within 5 seconds and support high usage.

Reliability & Maintainability

- Daily backups, error/activity logs and recovery after failure.
- 24/7 availability except planned maintenance.

Authentication

Encryption

Fast Response

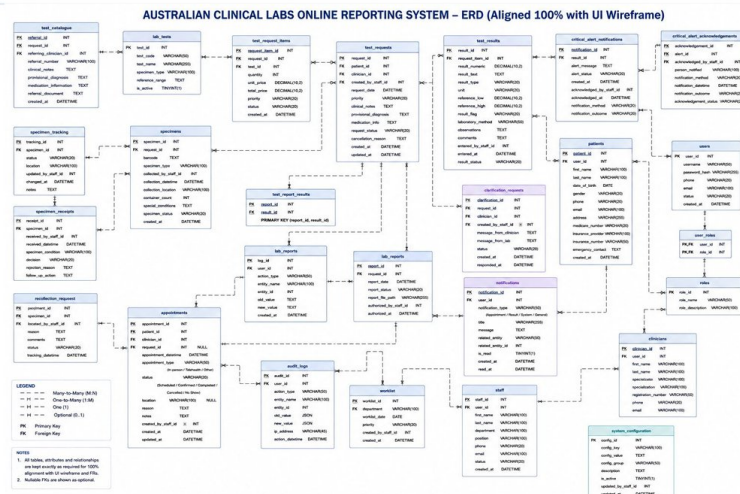

Daily Backup

Audit Logs

Recovery

NFRs protect patient information and support dependable laboratory operation.

ERD Overview — Common Group Database Model

Communication Plan

Stakeholder	Channel	Frequency	Owner
Client / Lecturer	GitHub comments, review meetings	Milestone review / as needed	Project Manager
Project Team	WhatsApp, GitHub Project board	Daily or task-based	All members
Development / QA	GitHub issues, test reports	During build and testing	Dev + QA leads
Database / ERD	Shared files, GitHub upload	At design updates	DB Admin + team
Final Submission	Repository + Moodle	Before deadline	Team leader

Communication keeps task ownership, approvals and design changes visible to the full team.

Lecturer Feedback — What Changed

GitHub task management	Simplified task names and clearer ownership
Project sequencing	Aligned dependent work: requirements → UI → database → testing
UI traceability	Mapped major interface elements to SRS functional requirements
Common ERD	Combined member ERDs into one integrated system ERD
Diagram documentation	Reduced unnecessary descriptions and kept visual artefacts concise

The final SRS was improved based on supervisor feedback and in-class guidance.

Project Value & Conclusion

Operational Value

- One connected workflow reduces repeated manual entry and improves request-to-report visibility.

Clinical & Data Quality

- Specimen tracking, validation, authorisation and audit trails support safer reporting.

Security & Governance

- RBAC, MFA, encryption, audit logs and DPIA strengthen privacy and accountability.

Secure Data. Accurate Results. Better Healthcare.
